NOAA forecasts success at AMS 2024

DEAR COLLEAGUES,

Last week, NOAA team members attended the 50th Annual American Meteorological Society (AMS) Meeting in Baltimore to discuss strategies for mitigating the impacts of human-induced climate change, among other relevant meteorological topics. With a record number of staff attendees and exhibitors, all from across NOAA leaders and scientists as they participated in a variety of roundtable discussions and panels regarding the agency's work in creating a climate-resilient nation. AMS attendees enjoyed a variety of lightning education sessions delivered by NOAA scientists and subject matter experts throughout the week at the NOAA exhibit booth.

Members from the NOAA Educational Partnership Program and Minority Serving Institutions pose with NOAA team members at the NOAA exhibit booth.
